

Revised: 04/19/23

Moonshadow Logistics (Ground, Air, and Space)

Ground

The Ground station services foot and horse couriers, small vehicles to semi-trucks and small to medium helicopters.

Teleporters are on the parking deck to the SS Moonshadow (SSMOON) and other parts of the complex. A 3-person teleport is located at the landing point.

The SSMOON is located at an altitude of 3,810 meters and separate from the main station SSTC.

The landing platform is attached to a lobby that connects to the corridor for the other modules.

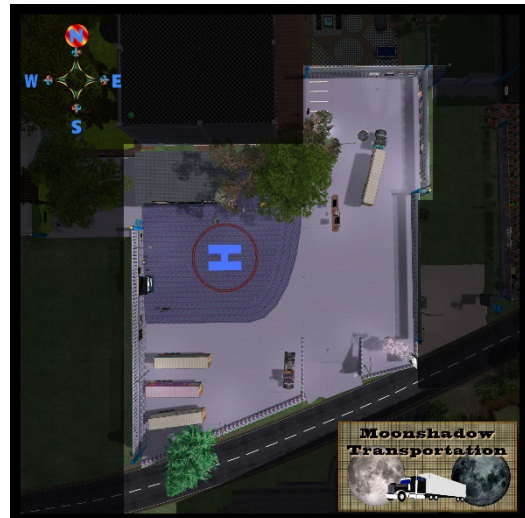

A tram car provides transportation between SSTC and SSMOON.

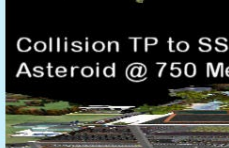

A set of teleport systems provided access between the sections of the station, ground services, and ship teleporters in the region.

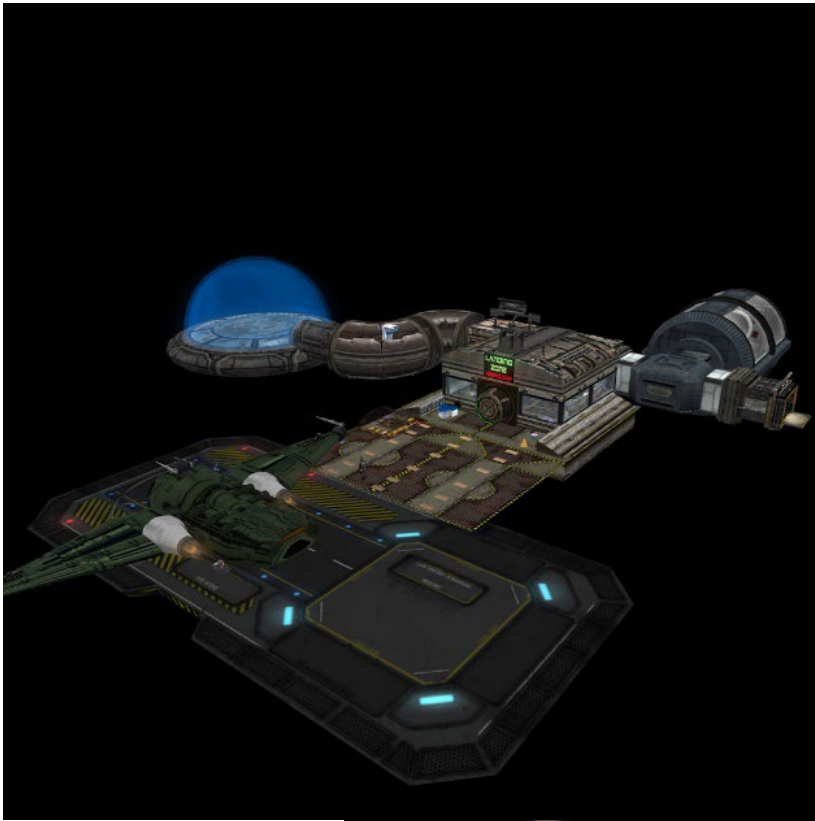

A domed landing pad provides landing for smaller crafts and for an atmospheric environment.

A Tollan Alteran stargate is available in the module nearest the shuttle car. Security is also located in this module.

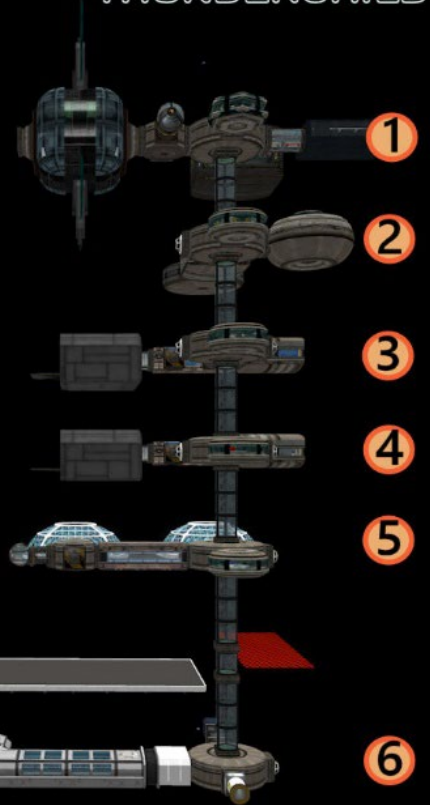

Moonshadow Space Station will be moving to the south side of Route 8 in the near future. This document will be updated at that time.
