

Moonshadow Logistics

The Ground station services foot and horse couriers, small vehicles to semi-trucks and small to medium helicopters. Large helicopters are services on the large landing ground deck at the SSTC Large parcel. A 3-person teleport is in the office for access to the SS MOON.

The space station is located at an altitude of 3,810 meters. The SSMOON connects to the SSTC-Large Platform, which in turn, connects to the SSTC Main. Cargo transporters move objects between the SSMOON Cargo Bay to the lower deck on the ground station.

A set of teleport systems provided access between the sections of the station, ground services, and ship teleporters in the region.

Cargo movement between sections of the station cluster is done by local equipment.

The SSMOON has storage, docking, mooring and other general services.
